net applications that can do this stuff, please send them to me. I am sorry but I do not understand how to use multithreaded applications. Please be so kind as to send me the software code. I would be happy to see a short and brief explanation about the software. Thanks in advance

A: The documentation for CWP is available here. You need to pay for the CWP software but the documentation is fairly well written. There are lots of examples that explain some of the GUI functionality as well. A good place to start is the Benchmark example provided on the documentation web page, the other example might help as well. CWP has two different ways to build simulation models, one is using the Interface Builder and the other is through C# with code generation. The Interface Builder is a GUI for creating models and is easiest to use for new users. The code generation model requires you to write the code for building the model in C#. I did not see a clear explanation of the advantages and disadvantages of each so you might want to look at the first example provided on the documentation page.

Q: MySQL query for inserting 5 rows from 2 tables I have a problem that requires inserting rows from 2 different tables. I have read that it is a better approach to use JOINS and other MYSQL query suggestions. However I am currently stuck with the following query: INSERT INTO table1 SELECT * FROM table1 LEFT JOIN table2 ON table2.id = table1.id LIMIT 5; The above query insert's all rows from table1 which are present in table2. I am trying to add a condition that says if table2.id is in table1, then do not insert, just copy what is in table2. Thanks If you are not inserting any rows that aren't already in table1 you can use a NOT EXISTS

INSERT INTO table1 (col1, col2) SELECT col1, col2 FROM table2 WHERE NOT EXISTS (SELECT 1 FROM table1 WHERE id = table2.id); I've changed the LIMIT to 5 82157476af
