#### What's New in the Html-form?

Concatenates the data to be added in one PDF to create a file that contains a complete project file. When you turn on the html-form you will be offered to manually enter a new project file which was created with the program. For creating a simple script, right-click on the project file, select copy to clipboard or right-click, display the context menu, right-click > paste as text. The program will then automatically launch with an empty project file on the screen. Note: html-form is a text editor for the viewing and editing of pdf documents. If you want to use html-form as a program, you must know how to use it. Requirements: HTML Vim Scripts for vim can be found at Introduction: html-form is a small tool that allows you to edit files of any type.
